

Data Security

Secure Access Solutions

Each day, millions of business documents are shared electronically via email, access, portals, instant messaging, extranets...these communications are considered secure when stored within corporate repositories or an intranet. But electronic documents can be unnoticeably opened, copied and forwarded anywhere without a trace. A large portion of this data is intended to be hidden or restricted. When revealed, it can lead to security breaches and policy risks through the accidental or malicious release of proprietary information, exposure of customer data or compromise of employee information.

Your chain of security is no stronger than its weakest link. In today's environment, many organizations rely solely on a desktop anti-virus solution as their guardian, or other partial protection considered totally secure. Still, ongoing threats such as Phishing and Malware attacks will constantly test your defenses, emerging to find their way into your networks.

Croop-LaFrance can provide a focused *Data Security Assessment* that will identify and prioritize any weaknesses in your security armor against all of the known forms of attacks facing us today. Our Assessment also serves as the cornerstone for compliance with regulations and new laws on the archiving and retrieval of information, whether electronic documents or email.

Croop LaFrance Inc.
Your IT Connection

For a comprehensive array of Managed Services options, Croop's *Secure Access Solutions* are silos of security remediation, such as *Vulnerability Defense* or *Intrusion Detection* offerings. Our Vulnerability Defense will proactively expose existing holes in the security of your network and identify associated risks. Intrusion Detection provides the 24x7x365 ongoing monitoring that facilitates successful recognition and mitigation of attacks.

Croop's Secure Access Solutions include:

Firewall Management and Reporting

Anti-Virus Management

Network Management and Reporting

Web Content Filtering

Wireless and Host Intrusion Detection

SPAM & Anti-Phishing Management

We deliver these hosted services bundled, or ala carte from the entire suite as customized offerings to provide cost-effective security solutions to our clients.
